Practical No. 5 - Write Algorithm, Code and Output

Q. 1. Write algorithm for the following:

a. Write a recursive function to print the factorial for a given number.

Code:

```
def fact(n):
    if n==0 :
        return 1
    else:
        return n* fact(n-1)
num=int(input("Enter the number : "))
print("The factorial of a number is  " , fact(num) )
print("Himanshu S037")
```

Output:

```
.py
Enter the number : 5
The factorial of a number is   120
Himanshu S037
```

b. Write a function to check the input value is Armstrong or not.

Code:

```
def armstrong(num):
    sum=0
    temp=num
    while (temp>0):
        digit=temp%10
        sum+=digit**3
```

```
        temp//=10

    if num==sum:
        print(num,"is a armstrong")
    else:
        print(num,"is not an armstrong")

num=int(input("Enter the number : "))
armstrong(num)

print("Himanshu S037")
```

Output:

```
Enter the number : 153
153 is a armstrong
Himanshu S037
```

c. Write a function to check the input value is Palindrome or not .

Code:

```
def palindrome(num):
  n= num
  rev=0
  while(num!=0):
   rev=rev*10
   rev=rev+int(num%10)
   num=int(num/10)
  if n==rev:
    print(n,"Is a Palindrome")
  else:
    print(n,"Is not a Palindrome")
num=int(input("Enter the number:"))
palindrome(num)
```

Output:

```
Enter the number:123
123 Is not a Palindrome

Himanshu S037
```

d. Write a lambda function that checks whether a given string starts with a specific character.

Code:

```
starts_with_char=lambda s,c:s.startswith(c)
print(starts_with_char("hello","h"))
print(starts_with_char("hello","t"))
print(starts_with_char("Python","p"))
print("Himanshu S037");
```

Output:

```
True
False
False
Himanshu S037
```

Q. 2. Write a python program to convert temperature from celcius to Fahrenheit. (Use the formula: (fahrenheit = (celsius * 9/5) + 32)

Code:

```
def TemperatureConversion(celsius):
   fahrenheit = (celsius * 9/5) + 32
   return fahrenheit

celsius=int(input("Enter the value of a temperature :"))
result=TemperatureConversion(celsius)

print("Celsius to Fahrenheit",result)
print("Himanshu S037")
```

Output:

```
Enter the value of a temperature :32
Celsius to Fahrenheit 89.6
Himanshu S037
```

Q. 3. Write applications of use defined, built-in and external modules in python?
