Practical No. 2 - Write Algorithm , Code and Output

Q. 1. Write algorithm for the following:

a. Write a program to generate the Fibonacci series.

Code:

```
n=int(input("Enter the number : "))
a=0
b=1
count=0

print("Fibonacci series")
while count<n :
    print(a,end=" ")
    a,b=b,a+b
    count+=1
print("\nHimanshu S037")
```

Output:

```
Enter the number : 5
Fibonacci series
0 1 1 2 3
Himanshu S037
```

b. Write a program to accept a number from the user display sum of its digits.

Code:

```
sum=0
n=int(input("Enter the number : "))
```

```
while (n>0):
    digit=n%10
    sum+=digit
    n//=10
print("The sum of the digits is : ",sum)
```

Output:

```
Enter the number : 111
The sum of the digits is : 3
```

Q. 2. Write a python program to display astrological sign for given date of birth. (Take input: month and day. Check which range the date falls into using if-elif statements. Return or print the corresponding zodiac sign.)

Code:

```
month=int(input("Enter the Month : "))
day=int(input("Enter the Day : "))

if (month == 3 and day >= 21) or (month == 4 and day <= 19):
    print("Zodiac Sign: Aries")
elif (month == 4 and day >= 20) or (month == 5 and day <= 20):
    print("Zodiac Sign: Taurus")
elif (month == 5 and day >= 21) or (month == 6 and day <= 20):
    print("Zodiac Sign: Gemini")
elif (month == 6 and day >= 21) or (month == 7 and day <= 22):
    print("Zodiac Sign: Cancer")
elif (month == 7 and day >= 23) or (month == 8 and day <= 22):
    print("Zodiac Sign: Leo")
elif (month == 8 and day >= 23) or (month == 9 and day <= 22):
    print("Zodiac Sign: Virgo")
elif (month == 9 and day >= 23) or (month == 10 and day <= 22):
    print("Zodiac Sign: Libra")
elif (month == 10 and day >= 23) or (month == 11 and day <= 21):
    print("Zodiac Sign: Scorpio")
elif (month == 11 and day >= 22) or (month == 12 and day <= 21):
    print("Zodiac Sign: Sagittarius")
elif (month == 12 and day >= 22) or (month == 1 and day <= 19):
    print("Zodiac Sign: Capricorn")
elif (month == 1 and day >= 20) or (month == 2 and day <= 18):
    print("Zodiac Sign: Aquarius")
```

```
elif (month == 2 and day >= 19) or (month == 3 and day <= 20):  
    print("Zodiac Sign: Pisces")  
else:  
    print("Invalid Inputs")  
  
print("Himanshu S037")
```

Output:

```
Enter the Month : 12  
Enter the Day : 2  
Zodiac Sign: Sagittarius  
Himanshu S037
```

Q. 3. Write a python program to calculate the sum of 3 given numbers. If the values are equal then return thrice of their sum.

Code:

```
mnum=int(input("Enter the num : "))  
num1=int(input("Enter the num1 : "))  
num2=int(input("Enter the num2 : "))  
  
sum=num+num1+num2  
  
if num==num1==num2:  
    print("Sum = ",sum*3)  
else :  
    print("Result = ",sum)  
  
print("Himanshu S037")
```

Output:

```
Enter the num : 12  
Enter the num1 : 167  
Enter the num2 : 12630  
Result = 12809  
Himanshu S037
```
