Python Programming Practical

Practical – 7

Roll No. : S037	Name: Himanshu Manoharlal Shrivastav
Class : SYIT	Date/Time of Submission: 04-08-2026

Q. 1. Write algorithm for the following:

a. Write a program that takes two lists and returns True if they have at least one common member.

Code:

```
list1=input("Enter the first list : ").split(",")
```

```
list2=input("Enter the second list: ").split(",")
```

```
#Remove Spaces
```

```
list1=[x.strip()for x in list1]
```

```
list2=[x.strip()for x in list2]
```

```
#Check for common
```

```
def has_common (lst1,lst2):
```

```
    return any(item in lst2 for item in lst1)
```

```
#Output
```

```
print("Common element exist:",has_common(list1,list2))
```

```
print("Himanshu S037")
```

Output:

```
Enter the first list : mango,banana,graphes,orange
Enter the second list: orange,blue,white,people
Common element exist: True
```

b. Write a Python script to sort (ascending and descending) a dictionary by value.

Code:

```
marks={'Raj' : 45,'Amit':80,'Radha':80,'Vinit':34}
asc=dict(sorted(marks.items(),key=lambda item:item[1]))
print("Ascending:",asc)

desc=dict(sorted(marks.items(),key=lambda item:item[1], reverse=True ))
print("Descending:",desc)

print("Himanshu S037")
```

Output:

```
Ascending: {'Vinit': 34, 'Raj': 45, 'Amit': 80, 'Radha': 80}
Descending: {'Amit': 80, 'Radha': 80, 'Raj': 45, 'Vinit': 34}
Himanshu S037
```

Q. 2. Write a python program that creates a list of 3 fruit names, adds one more fruit to the list, prints the entire list and prints the first and last fruit in the list.

Code:

```
fruit=['Apple','Banana','Orange']
fruit.append('Mango')
print("Fruit: ",fruit)
print("First Fruit : " , fruit[0])
print("Last Fruit : " , fruit[-1])
```

```
print("Himanshu S037")
```

Output:

```
==== RESTART: C:\Users\itlab\AppData\Local\Programs\  
Fruit: ['Apple', 'Banana', 'Orange', 'Mango']  
First Fruit : Apple  
Last Fruit : Mango  
Himanshu S037
```
