Practical No. 9 - Write Algorithm, Code and Output

Q. 1. Write algorithm for the following:

a. Write a program to count the occurrences of a specific word in a file using regular expressions.

Code:

```
import re
```

```
def count_word(filename, word):  
    try:
```

```
        with open(filename, "r") as f:  
            text = f.read()
```

```
        matches = re.findall(rf'\b{word}\b', text, re.IGNORECASE)  
        return len(matches)
```

```
    except FileNotFoundError:  
        print(f"Error: The file '{filename}' was not found.")  
        return 0
```

```
filename = input("Enter the filename: ")
word = input("Enter the word to search: ")
```

```
count = count_word(filename, word)
print(f"The word '{word}' occurs {count} times in the file.")
print("Himanshu S037")
```

Output:

```
----- RESTART: C:/Users/101ab/OneDrive/Des
Enter the filename: Details.txt
Enter the word to search: Himanshu
The word 'Himanshu' occurs 1 times in the file.
Himanshu S037
|
```

b. Write a program to extract all hyperlinks ([\(\) from an HTML file](#))

Code:

HTML

```
<!Doctype HTML>
```

```
<head>
```

```
    <title>HyperLink</title>
```

```
</head>
```

```
<body>
```

```
    <h1>Hyperlink</h1>
```

```
<a href="https://Facebook.com">
```

```
    </a>
```

```
<a href="https://google.com" target="_blank">Open Google in New
Tab</a>
```

```
<a href="https://Instagram.com" target="_blank">Open Google in
New Tab</a>
```

Main Python Code

```
f = open("Hyperlink.html")
```

```
data = f.read()
```

```
a = data.split('href="')
```

```
for x in a[1:]:
```

```
    print(x.split(' " ')[0])
```

Output:

Q. 2. a. Create a text file with student names and roll numbers.

Code:

```
101 Rahul  
102 Priya  
103 Amit  
104 Sneha  
105 Neha
```

Output:

b. Write a program to read and display all names.

Code:

```
file = open("students.txt", "r")
```

```
for line in file:
```

```
    print(line)
```

```
file.close()
```

```
print("Himanshu S037")
```

Output:

```
=====
101  Rahul
102  Priya
103  Amit
104  Sneha
105  Neha
```

c. Write a program to count total words in the file.

Code:

```
file = open("students.txt", "r")
```

```
data = file.read()
words = data.split()

print("Total words:", len(words))

print("Himanshu S037")
```

Output:

```
Total words: 10
Himanshu S037
```

d. Append "Attendance: Present" to the file.

Code:

```
file = open("students.txt", "a")

file.write("Attendance: Present\n")

file.close()

print("Attendance added successfully.")
print("Himanshu S037")
```

Output:

```
Attendance added successfully.
Himanshu S037
```
